

SESI SIMPOSIUM (8 OKTOBER 2024 /8.30 - 9.30 MALAM)

Beyond Numbers:
Exploring Qualitative
Methods to Transform Healthcare

**SILA IMBAS KOD QR ATAU AKSES PAUTAN UNTUK
PENGESAHAN KEHADIRAN**

Beyond Numbers: Exploring Qualitative Methods to Transform Healthcare

- Dr Nurul Athirah binti Naserrudin (PhD) & Dr Esther Wong Min Fui (DrPh)
- Institute of Health Systems Research, National Institutes of Health (NIH), Ministry of Health Malaysia

Positionality: Who are we?

Q1. What do you hope to learn in this qualitative research symposium?

What You'll Learn

- 1) Outline **basic principles** of qualitative research
- 2) Be aware of the **diversity** of qualitative approaches and methods
- 3) Understand how these methods can transform healthcare
- 4) **Feel inspired to apply it in your own healthcare setting!**

Structure

- 1) **Importance** of qualitative research in healthcare
- 2) **What** is qualitative research? Qual VS Quan
- 3) Basic **philosophy** of qualitative research
- 4) Qualitative research **approaches and methods**
- 5) **Role play**: Conducting interview: do's and don't's

Importance of Qualitative Research in Healthcare

Patient-centered insights

Drives innovation

Shapes better policies and strategies

Ensure comprehensive care

Improve communication

Disentangling the intersection of inequities with health and malaria exposure: key lessons from rural communities in Northern Borneo

Nurul Athirah Naserrudin, Pauline Yong Pau Lin, April Monroe, Sara Elizabeth Baumann, Bipin Adhikari, Anna Cohen Miller, Shigeharu Sato, Kimberly M. Fornace, Richard Culleton, Phaik Yeong Cheah, Rozita Hod, Mohammad Saffree Jeffree, Kamruddin Ahmed & Mohd Rohaizat Hassan 

Malaria Journal 22, Article number: 343 (2023) | [Cite this article](#)

Q2. What is the difference between qualitative VS quantitative research?

QUANTITATIVE DATA

NUMERICAL

DISCRETE

COUNTING

CONTINUOUS

MEASUREMENT

FACTUAL

QUALITATIVE DATA

DESCRIPTIVE

SENSES

FEEL

HEAR

SUBJECTIVE

SEE

SMELL

TASTE

Not everything that can be
counted counts,
and not everything
that counts can be counted.

Albert Einstein

I want to know **what you know**; we want to know **what youre thinking**, what **youre doing**, from your perspective'

What is Qualitative Research ?

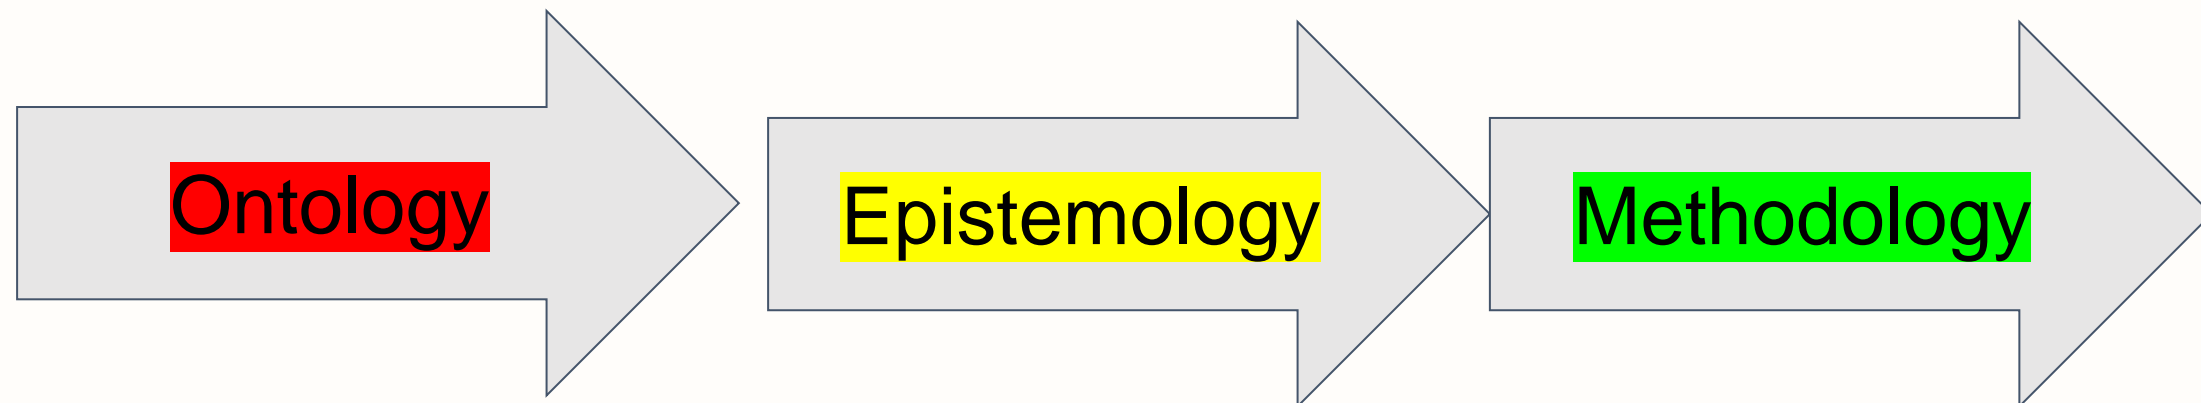

- *Any kind of research that produces findings not arrived by means of **statistical procedures or other means of quantification*** (Strauss & Corbin, 1998)
- *A research approach to exploring & understanding health and illness as they are **perceived by the people themselves**, rather than from the researcher's perspective (Morse, 2012)*
- *Emphasize the **'Why and How'** behind experiences, beliefs and perspectives*

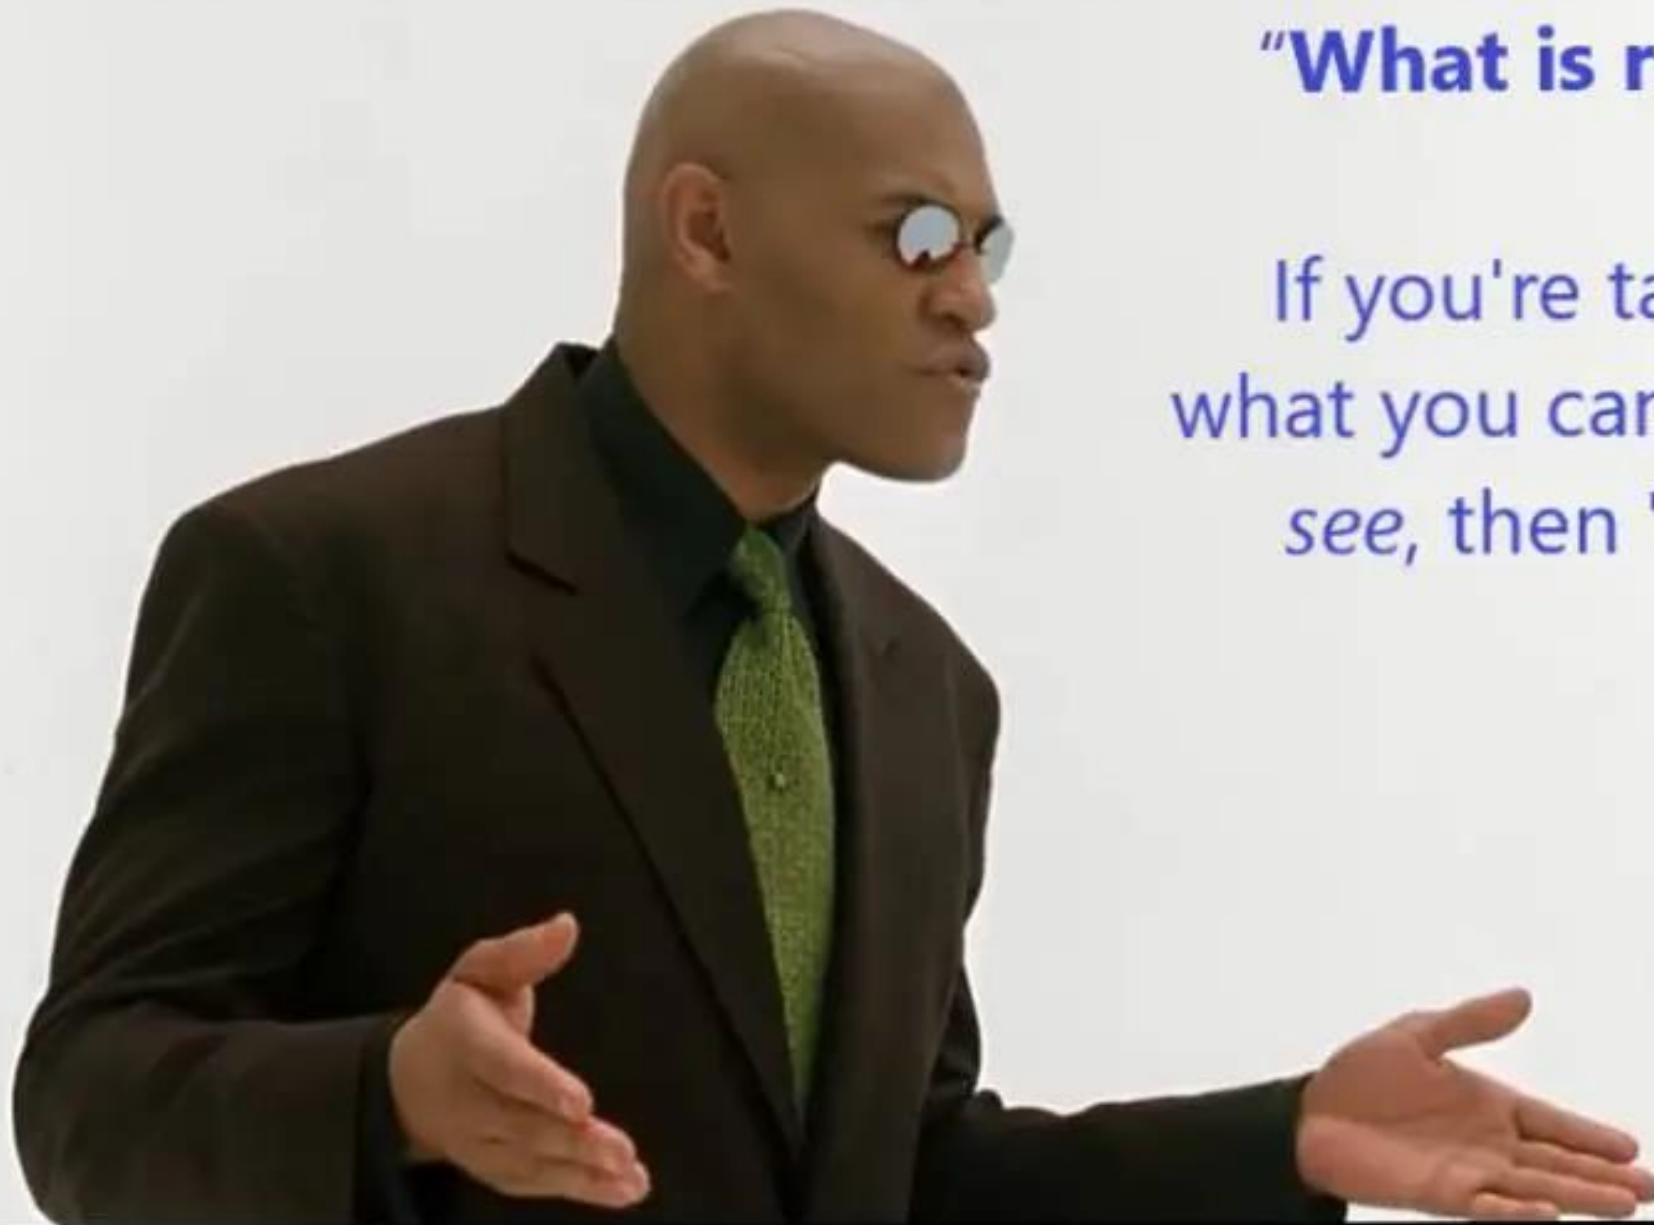

Q3: Based on your work settings, what problem can be addressed by qualitative research ?

To conduct qualitative study,
it is not easy as it sounds :)

Basic philosophy

"What is real? How do you define '**real**'?"

If you're talking about what you can *feel*, what you can *smell*, what you can *taste* and *see*, then 'real' is simply electrical signals interpreted by your brain."

Morpheus, The Matrix

SIX

Ontology:
What is reality?

Epistemology:
How do you know what you know?

NINE

There is one single objective truth VS there is no single objective truth

Qualitative Research Approaches

Design	Narrative	Phenomenology	Grounded theory	Ethnography	Case study
Aim	Exploring the life of participants	Understanding experiences about a phenomenon usually obtained by interviews	Developing a theory grounded from data in the field via multiple data generation periods	Study of a culture or social group in the natural environment of participants	In-depth long-term study of a single case or multiple cases
Main methods of data generation	Story collection via interviews and document analysis	Interviews and focus groups	Interviews and focus groups	Observations and interviews	Document analysis, archival records, interviews, and observations
Approaches to data analysis	Stories and historical content	Statements, meaning, essence description, themes and coding	Open coding, axial coding, selective coding, and conditional matrix	Detailed description of setting/group, analysis, and interpretation	Detailed description of setting/ individual, themes, and assertions
Approaches to data interpretation	Conceptual to form a detailed picture of a participants life	Themes categorised and described	Probability of concepts or a theoretical model	Themes categorised and described	Themes categorised and described

Exploring the facilitators and barriers towards the implementation of electronic prescribing, dispensing, and administration of medicines in hospitals in Ireland. PhD thesis. Diana-Hogan Murphy (2017)

Sample Size Recommendation

<i>Research design/method</i>	<i>Minimum sample size suggestion</i>
Research design^a	
Correlational	64 participants for one-tailed hypotheses; 82 participants for two-tailed hypotheses (Onwuegbuzie <i>et al.</i> , 2004)
Causal-comparative	51 participants per group for one-tailed hypotheses; 64 participants for two-tailed hypotheses (Onwuegbuzie <i>et al.</i> , 2004)
Experimental	21 participants per group for one-tailed hypotheses (Onwuegbuzie <i>et al.</i> , 2004)
Case study	3–5 participants (Creswell, 2002)
Phenomenological	≤ 10 interviews (Creswell, 1998); ≥ 6 (Morse, 1994)
Grounded theory	15–20 (Creswell, 2002); 20–30 (Creswell, 1998)
Ethnography	1 cultural group (Creswell, 2002); 30–50 interviews (Morse, 1994)
Ethological	100–200 units of observation (Morse, 1994)
Research method	
Focus group	6–9 participants (Krueger, 2000); 6–10 participants (Langford <i>et al.</i> , 2002; Morgan, 1997); 6–12 participants (Johnson & Christensen, 2004); 6–12 participants (Bernard, 1995); 8–12 participants (Baumgartner <i>et al.</i> , 2002)

^aFor correlational, causal-comparative and experimental research designs, the recommended sample sizes represent those needed to detect a medium (using Cohen's [1988] criteria), one-tailed statistically significant relationship or difference with 0.80 power at the 5% level of significance.

Pros and Cons of Qualitative Research

Pros

- Produces rich descriptive data
- Give participants 'voice'
- Can open new concepts and areas not anticipated

Cons

- Time consuming
- Subjective ?
- Can't be extrapolated/less generalizable
- Potential for bias

Qualitative Methods

- **Photovoice**
- **Interviews (and Focus group discussions)**

Dr Athirah showing the Photovoice to Rohaizat.

Positive early results on Malaria research

KUDAT: The usage of a new method known as "Photovoice" in medical research on Malaria in Kampung Lotung near here succeeded in obtaining positive early research results.

Head Researcher from the Medical Faculty of Universiti Kebangsaan Malaysia (UKM), Associate Professor Dr Mohd Rohaizat Hassan, said such results are unbi-

Through their art, they bring new insights and perspectives which raise awareness of hidden or overlooked issues and aspects of the community.

Participants are asked to express their points of view or represent their communities by photographing scenes that highlight research themes.

Common research themes include community concerns, community assets,

with the use of various measures like mosquito nets, blood check, and spraying insect repellents inside the house.

He however assured that UMS is working hand-in-hand with the Ministry of Health to counter the problem.

The main researcher, Dr Nurul Athirah Naseruddin thanked all those involved in the project especially the local residents without whose help and cooperation it

What is In-depth Interview (IDI)

The **in-depth interview (IDI)** is a technique in Qualitative Research designed to elicit in depth the participant's perspective.

Researcher motivated by the desire to learn everything from participant.

Face to Face or **Online** : One interviewer and one participants.

What is Focus Group Discussion (FGD) ?

- Is a qualitative data collection method in which one or two researchers and several participants meet as a group to discuss a given research topic.
- The richness data emerges from the group dynamic and from the diversity of the group.
- Lead by moderators and assists by a few note takers
- Not suitable for study involved sensitive issues.
- Total participants: **minimum 6** , but typically **8-12 persons**

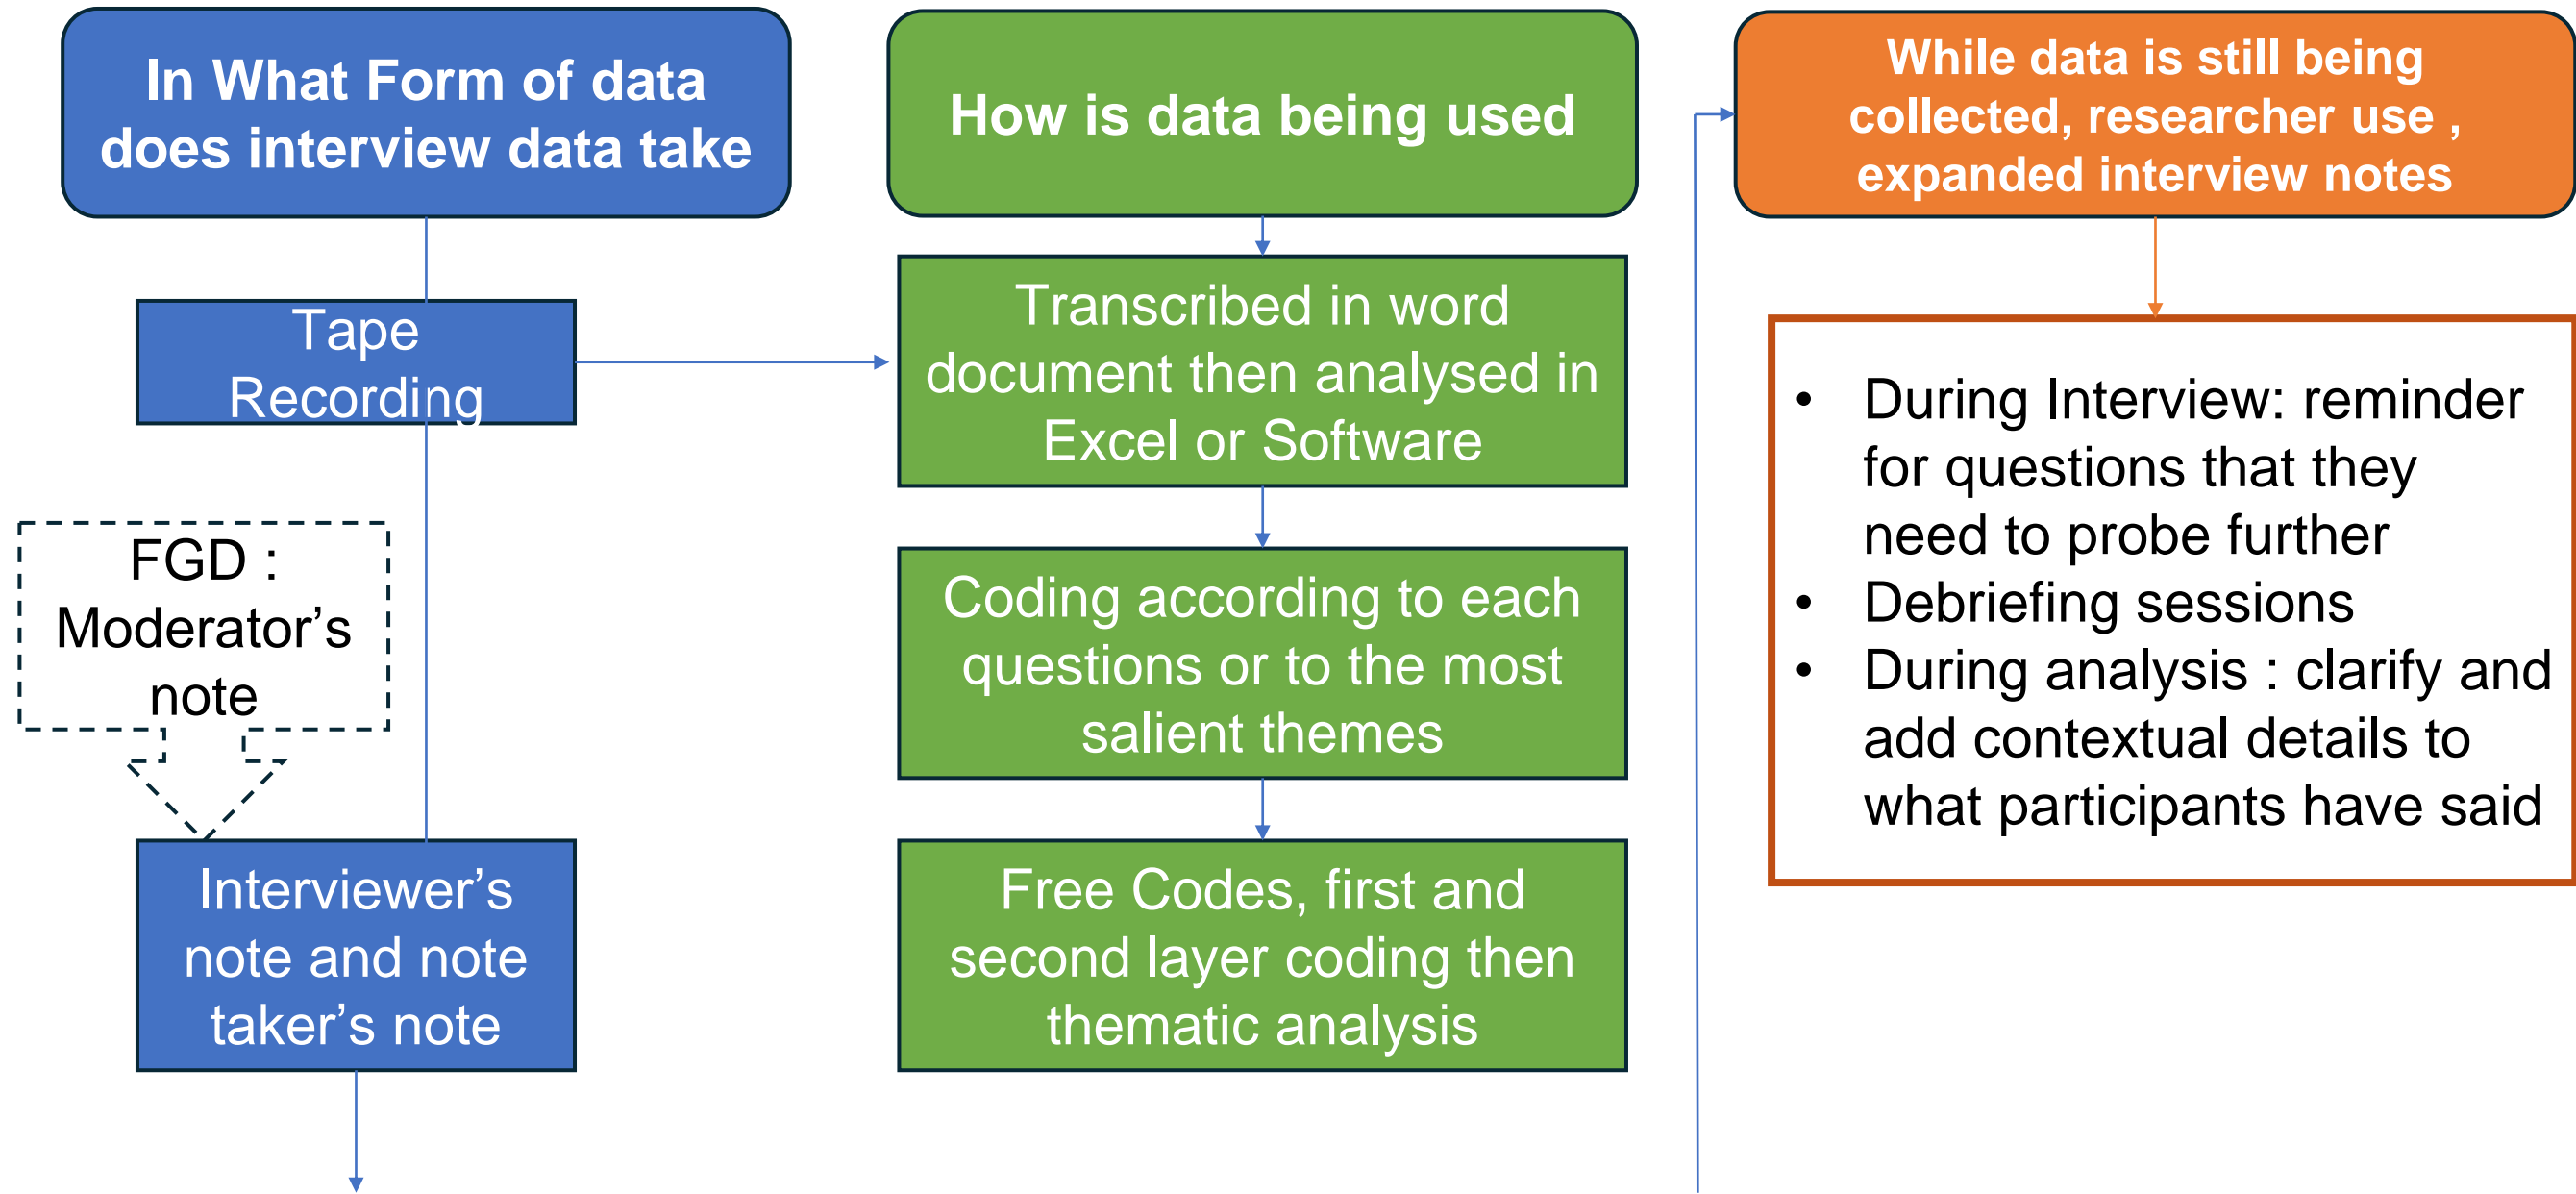

REC

Table 4. Strengths of in-depth interviews versus focus groups

	Appropriate for	Strength of method
Interviews	Eliciting individual experiences, opinions, feelings Addressing sensitive topics	Elicits in-depth responses, with nuances and contradictions Gets at interpretive perspective, i.e., the connections and relationships a person sees between particular events, phenomena, and beliefs
Focus groups	Identifying group norms Eliciting opinions about group norms Discovering variety within a population	Elicits information on a range of norms and opinions in a short time Group dynamic stimulates conversation, reactions

Types of Data for IDI and FGD

Q4: Give me the Differences between IDI and FGD

Steps and Process of conducting IDI and FGD

conducted IDI and FGD

Steps and Process of conducting IDI and FGD

Pre-interview preparation

During-Interview

Post-Interview

Pre-interview preparation

Recruit interviewee according to the study criteria

Agreement prior to written consent and set an appointment

- Send them the information sheets earlier
- Timing

Confirm the interview setting.

- Ensure the interview takes place in a **comfortable environment**
- If online , ensure the interviewee find a proper place : environmental noises
- Local implications of male-female interactions.
- FGD : Ensure the place is suitable for the number of the participants

Preparation of Equipment

Test your equipment : is working and fully charged.

- **Face to Face**

- Good quality **Digital Voice Recorders**: Sony ICD 370/ICD-UX570 (Stereo Microphones, internal storage with built in USB)
- Other brand : Olympus VN-7200

- **Online**

- Zoom and Google meet.
- Help the participants to download app in their mobile.

Researcher's Preparation

- **Be familiar with research documents:**
become thoroughly familiar with the informed consent documents.
- **Familiar with the interview guide.**
 - Need not search through the interview guide
 - Spontaneous to come out with the follow up questions.
- **Practice interviewing.**
 - Piloting in similar population with informed consent
 - Friends and family members
- **Practice using the equipment.**

During-Interview

1

Using a checklist, verify that you have all the equipment.

2

If the instruments and consent forms exist in more than one language, be sure you have the appropriate ones for that participant.

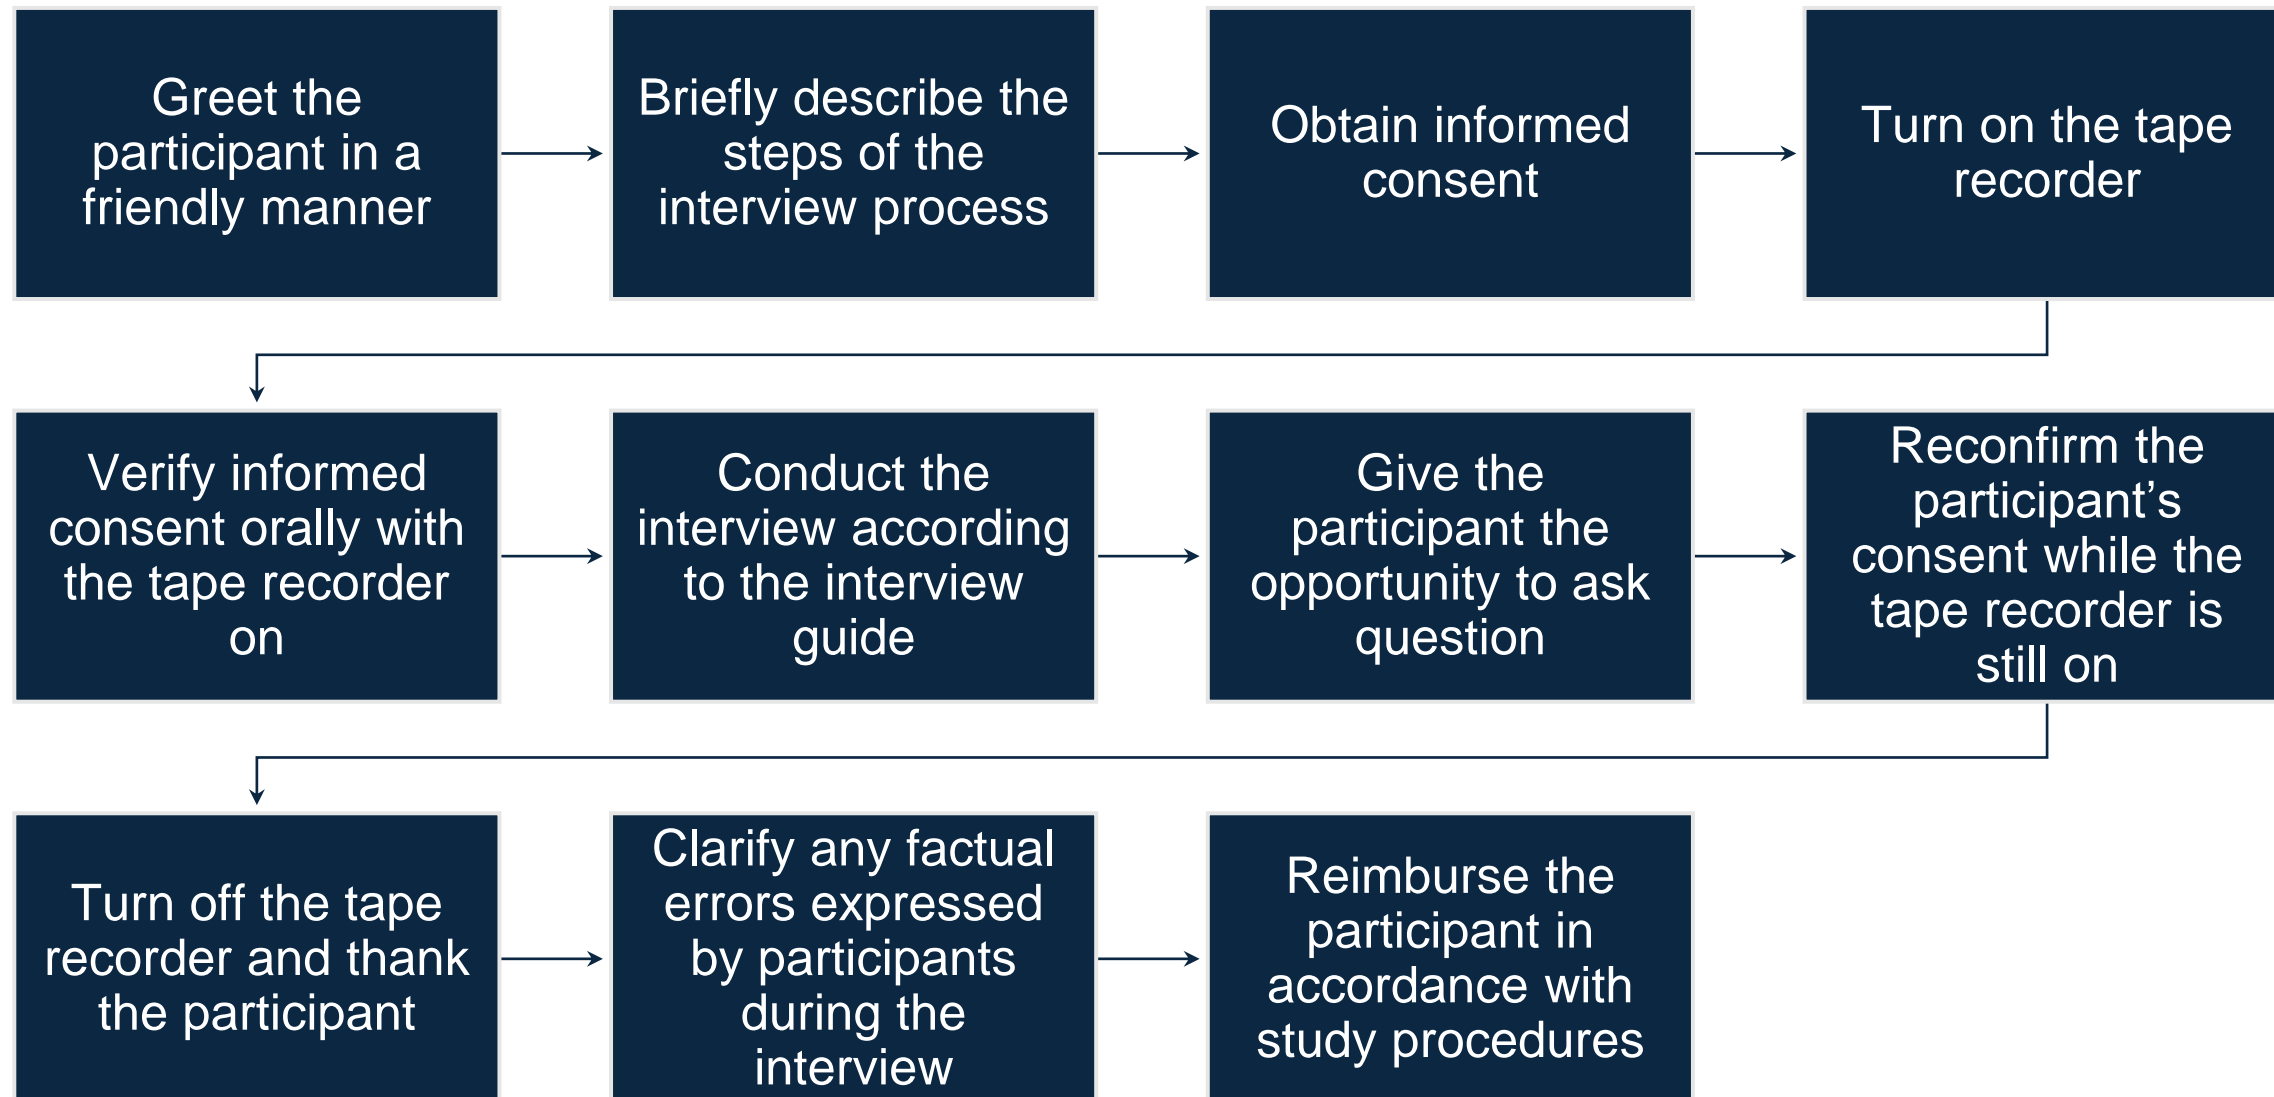

3

Label all data documentation materials with an Research ID number, notebooks, and question guides.

4

Arrive early at the interview site to set up equipment and decide on the arrangement for interviewees (FGD)

Conduct Interview

How should I present myself to participants?

1

Establish rapport. First impression is always important.

2

Appropriate for the specific culture and setting

3

Show respect for the participant.

4

Reduce distraction.

Briefing on the Study

- Informed consent is required before the interview begins.
 - Verbally recorded or written consent
- ensure that participants understand
 - It is not obligations
 - They can refrain from answering any questions
- Explain how will the IDI or FDG data will be used and who will have access to it.

The Rusher

One eye on the clock, always trying to hurry things along and get the discussion over with.

The Poser

Totally fake, only joining to get the incentive. Speaks fluent nonsense.

The Dominant

They don't know when to keep their mouths shut and full of themselves.

The Sheep

A follower. They sway where the wind blows. No originality and own opinion.

The Comedian

Always trying to make everyone laugh like their lives depend on it.

The Mannequin

Even if you punch them, they wouldn't notice. They don't participate and are highly disengaged.

The Active Thinker

Follows the discussion, highly engaged and participative.

The Silent Thinker

The type that listens actively and think before they talk. Introvert version of the active thinker

The Aggressor

A man with a fork in a world of soup . Very negative, can be kill-joys and bullies.

The Therapy Seeker

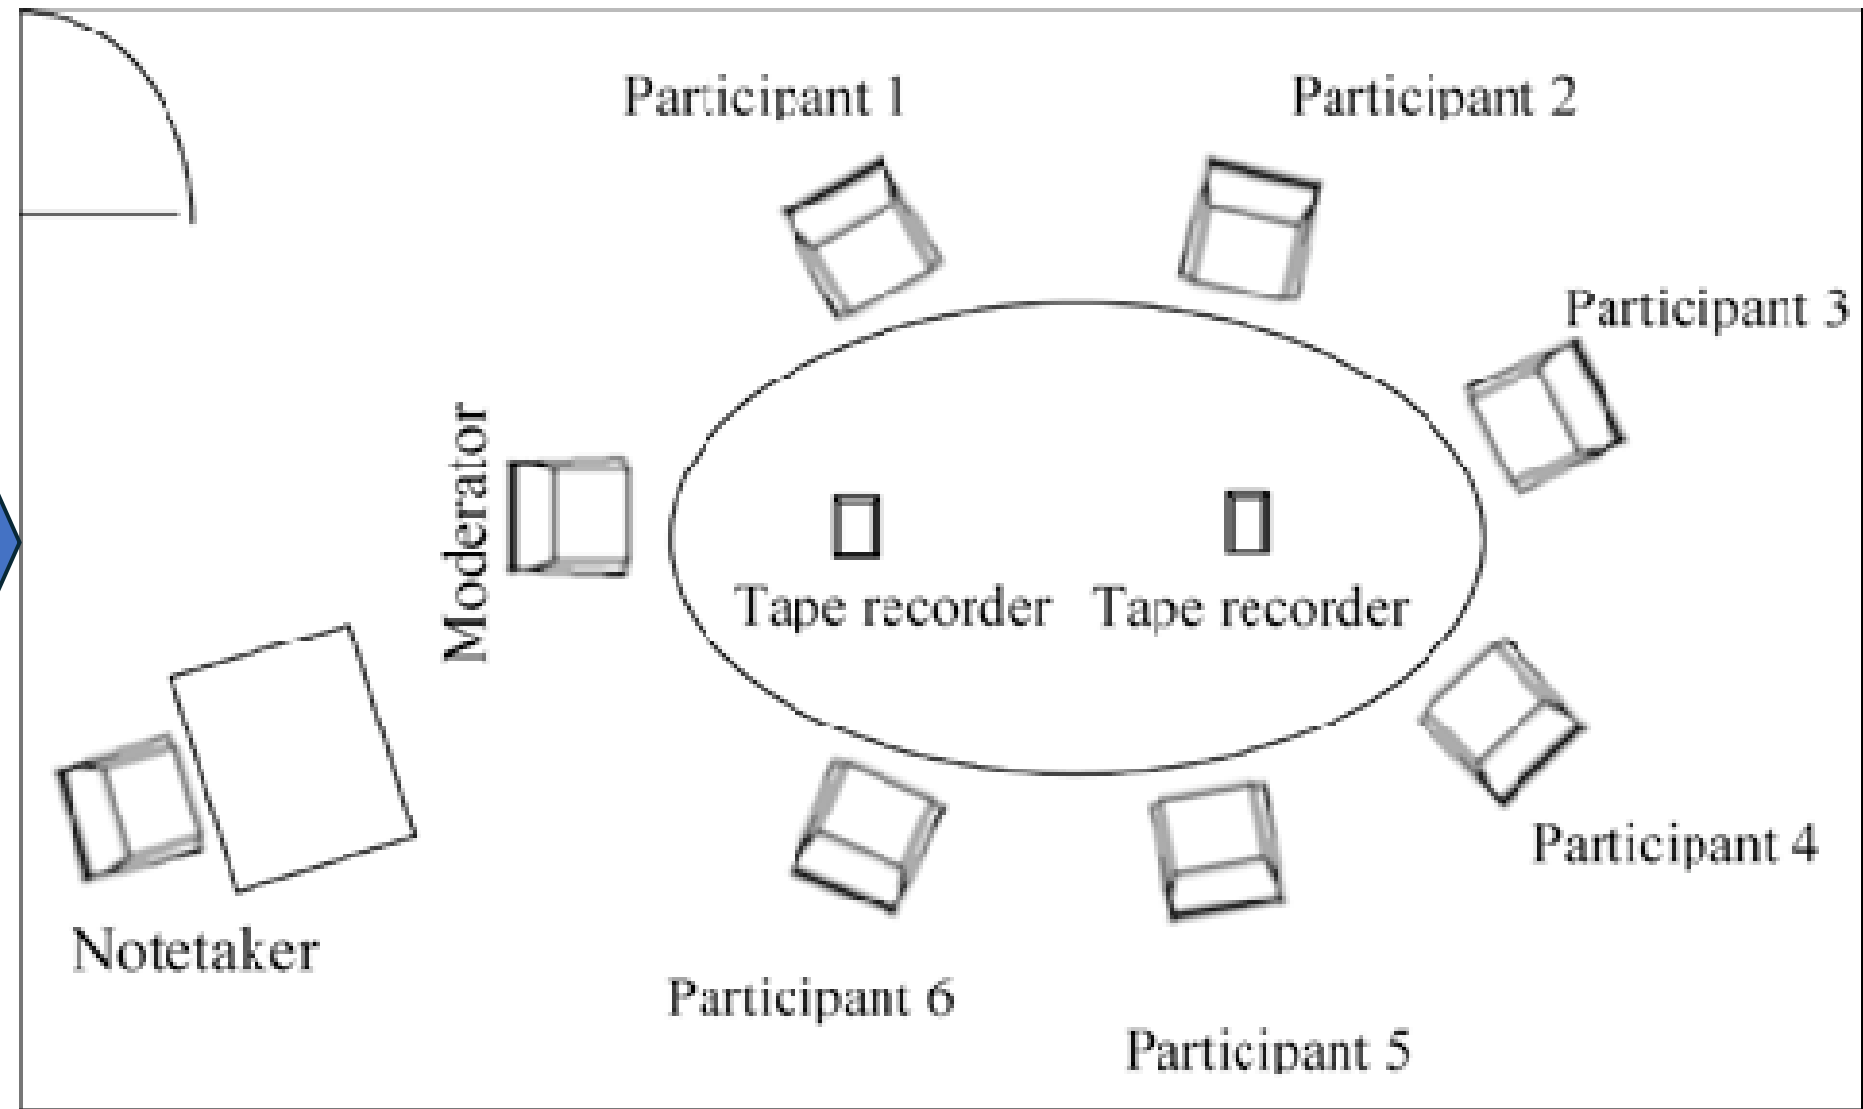

The type that uses focus groups as therapy for their personal crises.

Set Ground Rules for FGD

- Ask participants not to disclose nor discuss details of the content of the discussion after completed FGD.
- Ask participants to respect other group members by not divulging what any participant says
- Emphasize on non-disclosure from the researchers.
- Ask that participants speak one at a time.
- Ask participants to treat one another with respect.
- All participants need to feel free to express their opinions.

Sketch of the arrangement of the Participants During FGD

- Moderators (Lead), Assisted by the Note-taker.
- Anonymous : Given Name Tag P1 to
- Note taker will sketch the siting of the participants in the room

Conducting Effective Qualitative Interviews: Dos and Don'ts

Dos	Don'ts
Establish rappor t	Interrupt or steer the conversation
Listen attentively	Lead with your own opinions
Ask open-ended questions	Judge or criticize the participant

McGrath, C., Palmgren, P. J., & Liljedahl, M. (2018). Twelve tips for conducting qualitative research interviews. *Medical Teacher, 41*(9), 1002–1006.

Effective Questioning

Avoid asking closed-ended questions

- Yes/no question
 - Awak dah makan ke belum ?
 - Adakah anda rasa murung ?
- Apakah perasaan anda hari ini?

“ saya rasa tak happy , sebab saya baru je hilang pekerjaan. Mak saya baru diagnose cancer ...saya tak tahan lagi ...”

Effective Questioning

- No leading questions

Example:

“Do you think people in the school community don’t talk about sex and condoms because they might be stigmatized and seen as promiscuous?”

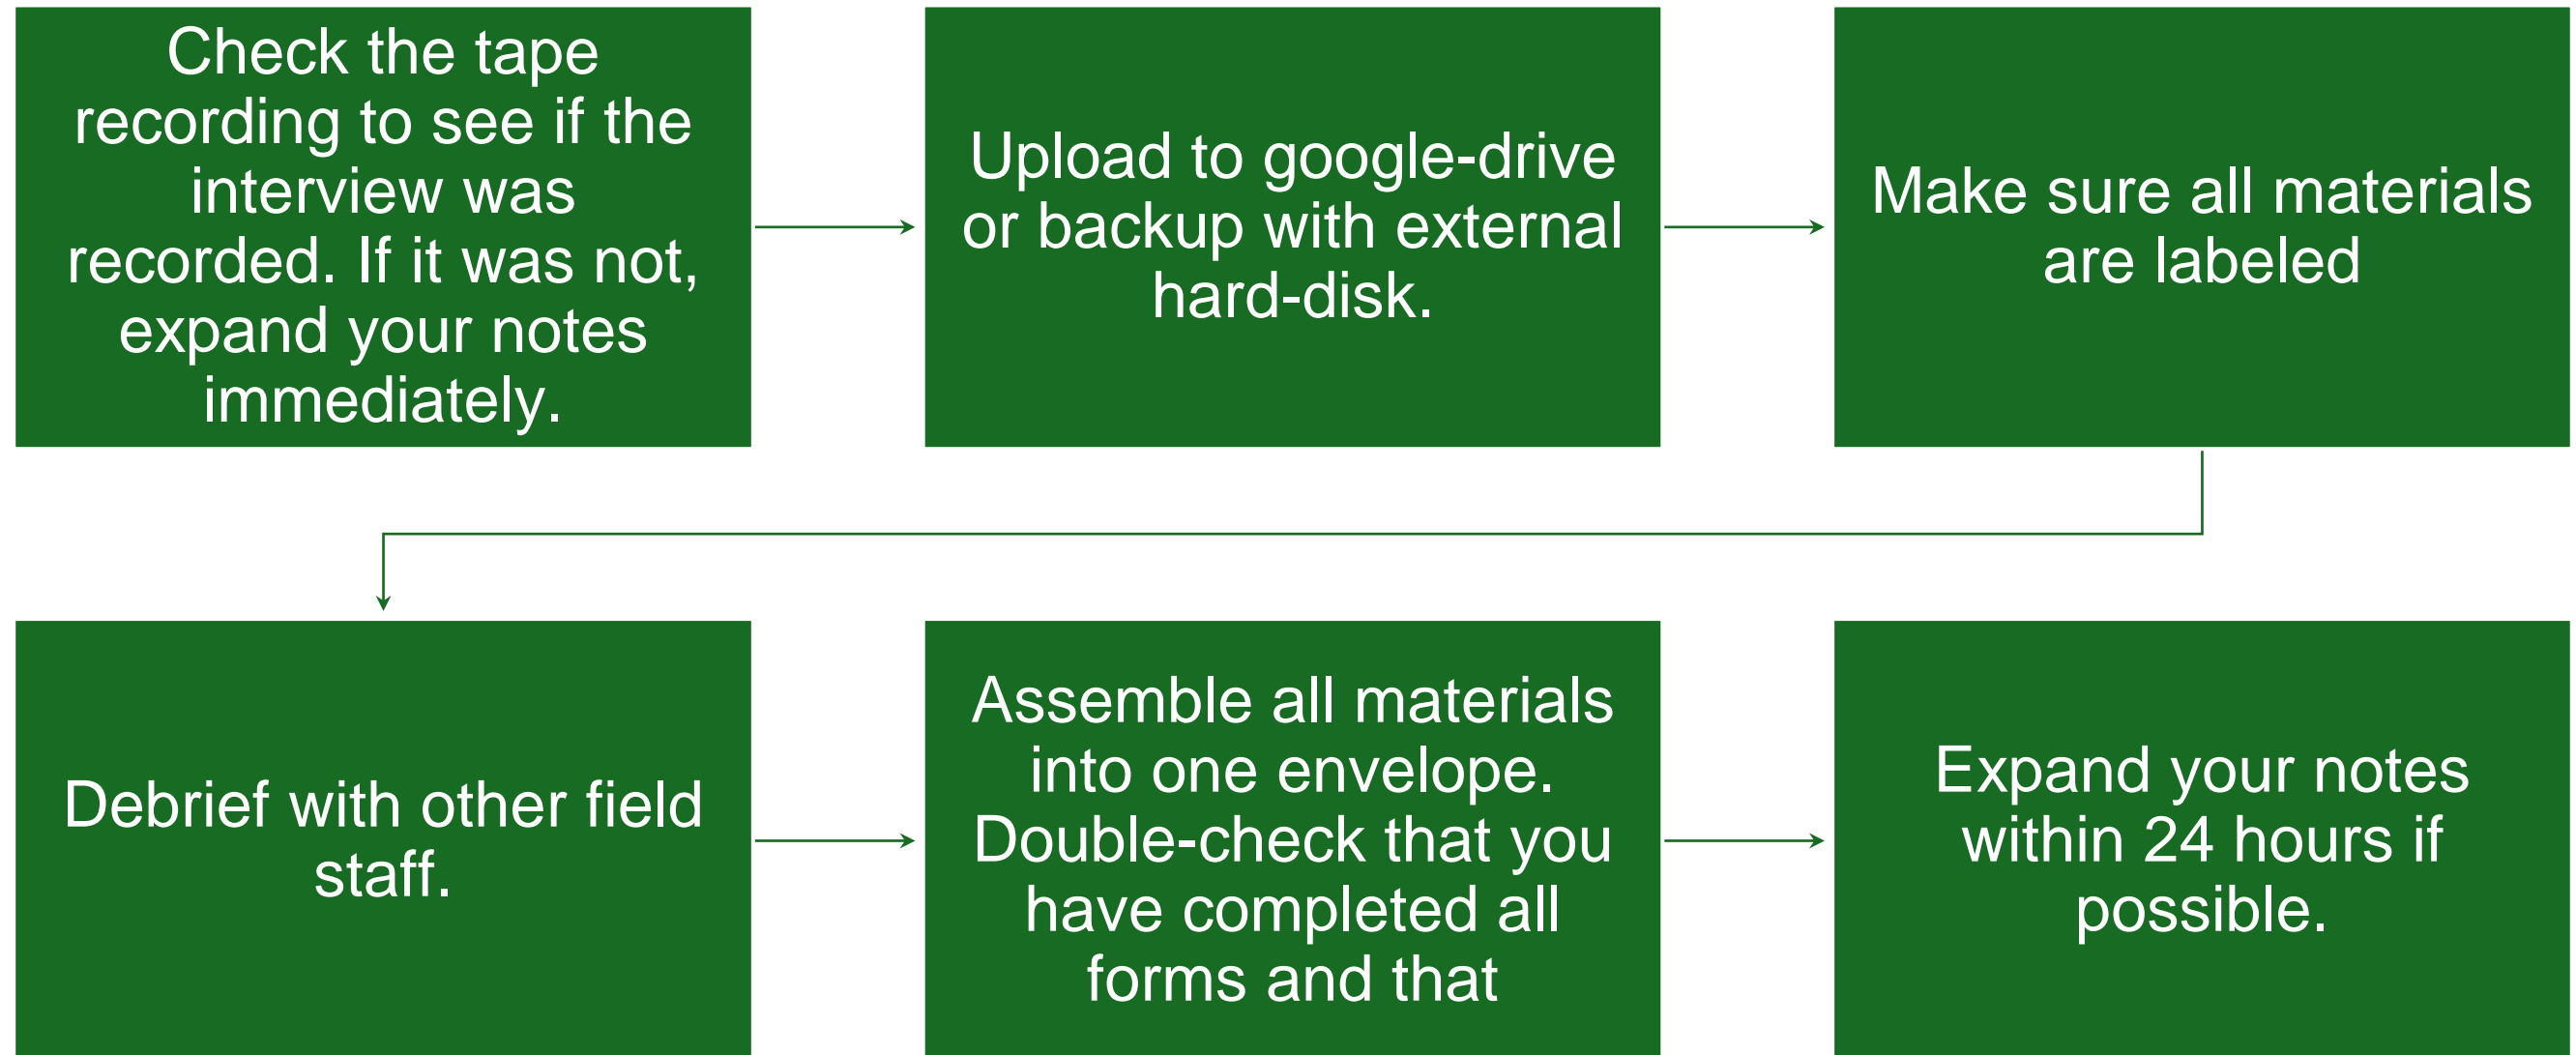

“What do you think stops people in the school community from talking about sex and condoms?”

Contoh:

“Anda berpendapat bahawa masalah kemurungan adalah disebabkan oleh masalah kewangan?”

“Bolehkah puan ceritakan faktor penyebab utama terjadinya kemurungan?”

Post-Interview

. Based on the video you watched, can you identify any aspects that you found inappropriate

- Q5: Please give examples of effective questioning.

An illustration of four healthcare professionals in a meeting. Two men with dark hair are at the top, and two women wearing hijabs (one pink, one blue) are at the bottom. They are all wearing white lab coats and have stethoscopes around their necks. There are three blue speech bubbles floating above the men. The background is a light, neutral color.

Roleplay: Doing interview? Let's try!

What is the challenge to provide efficient healthcare in your setting?

Call to action

1. Use qualitative research to **better understand patient** needs and provide more personalized care
2. Identify **social and cultural factors** affecting health to address disparities in healthcare.
3. Analyze **processes and interactions** to make healthcare delivery more efficient and effective.
4. Use **qualitative insights** to inform policies and practices that reflect real-world healthcare challenges.

Conclusion

1. Qualitative research is a powerful for understanding the **deeper aspects of healthcare**
2. Qual **see beyond the numbers**, informing the development of interventions and policies that better address patient needs, workplace challenges, and health disparities
3. Researchers must carefully **consider the limitations and challenges** associated with qualitative research.
